Fax 970.203.0506

The Av-Stack from Avionics Specialists is not just another VFR panel package. This fully integrated and mechanically unified rack stack is ready to insert in your panel opening with no additional assembly. We have already connected all the trays into a single, airworthy unit using the top quality design and fabrication methods that keep pilots coming back to Avionics Specialists.

The trays are held together with a structure that is both lightweight and extremely strong. We use nut plates to permit small adjustments so the entire assembly can be aligned to fit your panel exactly. By setting a few screws, you can fit the Av-Stack to your panel and align the radios for a perfect appearance.

The GPS, transponder and comm are already wired together with the correct altitude digitizer. Each cable is carefully routed and bundled with tie wraps for a secure and professional finish.

Av-Stack is designed around the best Garmin solutions for VFR aviation. The GPSMap 496 provides unparalleled GPS navigation.

Combined with the SL 40 and GTX 327 you get full transponder and communications solutions.

Just make a few wiring connections by following our instructions and attach the unit to your panel with screws or rivets.
